

ABSTRACT OF DISCLOSURE

A refrigerator having a main body formed with a storing compartment. A first cool air duct is located in a rear of the main body and a lamp unit is mounted in an upper part of the main body. The lamp unit includes a lamp and a lamp case. A second cool air duct is formed in an upper part of the lamp case to communicate with the first cool air duct and allows cool air flowing through the first cool air duct to flow out toward a front of the storing compartment of the main body.
